Summary

Driven Software Engineer with over 3 years of industry experience in both a consultancy and startup environment. Experienced in delivering robust solutions across many sectors including defence, medical and robotics. A record of working directly with clients and taking technical ownership of complex projects across a wide range of technologies, with strong programming experience in C++ and C#.

Strong advocate of best development practices, to ensure completion of the software development lifecycle to the highest standards.

Experience

Launchpad Build

Edinburgh

SOFTWARE ENGINEER (NOV. 2025 - PRESENT)

Nov. 2025 - Present

- Contributed to core product development in a fast-paced robotics startup, building features across the full stack.
- Built the ROS 2 to Beckhoff PLC control stack, bridging TwinCAT and ROS 2 over ADS using ros2_control.
- Contributed performance improvements to the open-source Beckhoff ADS hardware interface for ros2_control, reducing real-time control-loop overhead and eliminating all control-loop overruns in benchmark testing.
- Developed Beckhoff PLC software in Structured Text, implementing multi-axis gantry motion, machine safety, and reusable function blocks for grippers, silos, vacuum, and vision peripherals.
- Travelled to Los Angeles for a two-week on-site deployment, commissioning a system I designed and implemented through hands-on integration, testing, and debugging.
- Established the team's CI release automation, versioning strategy, and development workflows, helping define engineering best practices in a growing startup.

Bitwise Limited

Dunfermline

SOFTWARE ENGINEER (SEP. 2024 - NOV. 2025) | GRADUATE ENGINEER (JUL. 2023 - SEP. 2024)

Jul. 2023 - Nov. 2025

- Placed at a leading UK defence company, collaborating within a large team to deliver quality airborne software.
- Placed as the primary engineer for a robotics project for a commercial client. Successfully transformed a struggling product to market under challenging budget and time constraints, whilst working within the client's multidisciplinary team.
- Contributed to the full SDLC for multiple Blood Glucose meter projects, ensuring compliance with medical regulatory standards throughout implementation, documentation, and testing.
- Developed a cryptographic solution for a negative pressure wound therapy device which ensured device security during service and repair.
- Enhanced internal testing infrastructure by improving traceability, enabling its use on safety-critical projects.
- Recognised by the Chief Engineer for commitment to development practices and championing policy.
- Successfully mentored engineers and a summer intern, supporting professional development.
- Demonstrated great adaptability by learning new concepts, technologies, and frameworks to meet customer needs.

Technical Skills

Programming Languages	Deployed production code in C++, Rust and C#
Frameworks	.NET Framework, ROS 2
Communication Protocols	CAN, UART, SPI, I2C
Other	Git, Jira, Confluence, Beckhoff PLCs

Education

Abertay University

Dundee

2:1 BSc (HONS) IN COMPUTING

Sep. 2019 - Jul. 2023

- Established a strong foundation in software engineering principles and methodologies.
- Gained hands-on experience with diverse technologies including C++, C#, Python, Machine Learning, and Android development.
- Developed understanding of the software development lifecycle through personal projects and coursework.

Woodmill High School

Dunfermline

SCOTTISH HIGHER: AABBBC | SCOTTISH ADVANCED HIGHER: C

Aug. 2012 - May. 2019
